

Community Project

Rice Husk Briquettes

Proposal of Action:

Need in the community

- The rice husk is being burnt and causing air contamination.
- Environmental solution: Factory owner needs to have other alternatives for getting rid of the rice husk instead of burning it.

How will I address this need?

My action is to provide a solution for the environmental contamination produced by the burning of the rice husk. I will make rice husk briquettes to use as fuel for barbeques as a replacement for carbon or gas.

As an additional action I will create a proposal for mothers who are the head of their household to sell the briquettes and present it to a foundation near the rice factory. The mothers can earn extra money on their own by making their own briquettes and also generate CSR (Corporate Social Responsibility) for a private company. If this develops well, in the future these mothers can create their own business and instead of making the briquettes by hand they can buy their own briquette machine to make it more efficient so they can sell it in the market. I wanted to help this specific foundation because it was close to the rice company. So to help them I sent them a letter to inform them about my idea and my project and presented this proposal to them.

Rice Husk Briquettes & mould
